SPARTAN MISSION:

Meeting the needs of all students with a proud tradition of academic excellence.

DEPARTMENT: **Science**

COURSE: **Biology**

- Scientific Method Lab - Tums, Senses Distinguish characteristics of life
- Interpret scientific investigations using scientific practices
- Relate science to current events
- Demonstrate proper use and care of a compound microscope

Assessments

Formative:

- Identify the characteristics of life
- Do Now - scientific inquiry
- Strategic questioning
- Group discussion - scientific practices in action

Summative:

- Chapter 1 Test (multiple choice and short answer)
- Chapter Quiz
- Formal Lab Report - Dish Soap & Environment Lab
- Demonstrate proper and safe lab techniques

Benchmark:

- Biology Skills Benchmark

Alternative:

- Characteristics of Life Project
- Lab Portfolio

Interdisciplinary Connections

ELA:

LA.9-10.RST.9-10.3: Read and follow all lab procedures.

LA.9-10.WHST.9-10.2: Writing component to each unit in the form of lab reports. Additionally, each test includes an essay and/or short answer questions.

Mathematics:

MA.9-12.N-Q.A.1: Calculate Heart Rate Lab.

MA.9-12.N-Q.A.1: Calculate measurements of bubble diameter in Dish Soap & Environment Lab.

MA.9-12.A-REI.D.10: Graphing of two variables.

Additionally, each test includes an essay and/or short answer questions.

DEPARTMENT: **Science**

COURSE: **Biology**

Career Readiness, Life Literacies, and Key Skills

9.4.12.CI.1: Demonstrate the ability to reflect, analyze and use creative skills and ideas (e.g., 1.1.12prof.CR3a).

Technology Integration

Career Education

CRP-1: Students will make a decision about the utilization of an environmentally safe soap versus a store brand being a responsible member of the community.

CRP-2: Students use knowledge and skills through their lab work.

CRP-12: Students work productively in collaborative groups using culturally global competence.

Time Frame	2 Weeks
Topic	
Matter & Energy Transformation in Ecosystems	
Alignment to Standards	
<p>HS-LS1-5: Use a model to illustrate how photosynthesis transforms light energy into stored chemical energy.</p> <p>HS-LS1-6: Construct and revise an explanation based on evidence for how carbon, hydrogen, and oxygen from sugar molecules may combine with other elements to form amino acids and/or other large carbonbased molecules</p> <p>HS-LS1-7: Use a model to illustrate that cellular respiration is a chemical process whereby the bonds of food molecules and oxygen molecules are broken and the bonds in new compounds are formed resulting in a net transfer of energy.</p> <p>HS-LS2-3: Construct and revise an explanation based on evidence for the cycling of matter and flow of energy in aerobic and anaerobic conditions.</p> <p>HS-LS2-4: Use mathematical representations to support claims for the cycling of matter and flow of energy among organisms in an ecosystem</p> <p>HS-LS2-5: Develop a model to illustrate the role of photosynthesis and cellular respiration in the cycling of carbon among the biosphere, atmosphere, hydrosphere, and geosphere.</p>	
Learning Objectives and Activities

SPARTAN MISSION:

Meeting the needs of all students with a proud tradition of academic excellence.

DEPARTMENT: **Science**

COURSE: **Biology**

Learning Objectives:

- What are the various trophic levels in an ecosystem?
- How does matter cycle through an ecosystem?
- What happens to energy in an ecosystem?
- Relate a food chain to a food web
- What would happen if organisms were removed from a food web?
- What are the products and reactants of photosynthesis and respiration?

Learning Activities:

- Photosynthesis Lab
- Photosynthesis & Respiration Project
- Anaerobic Respiration with Yeast
- Create a food web
- Identify trophic levels in a food web
- Diagram the process of photosynthesis and cellular respiration and explain the cyclic nature
- Trace the pathway of carbon in the processes of photosynthesis and cellular respiration
- Photosynthesis & Respiration Project

Assessments

Formative:

- Do Now - ecology quest
- Strategic questioning - differentiate between a keystone, generalist, etc.
- Design your own experiment to investigate photosynthesis and respiration
- Google questions

Summative:

- Building a food web
- Photosynthesis and Cellular Respiration Project

Benchmark: N/A

Alternative:

- Lab Portfolio
- Gizmo food web

Interdisciplinary Connections

ELA:

Office of Teaching and Learning

SPARTAN MISSION:

Meeting the needs of all students with a proud tradition of academic excellence.

DEPARTMENT: **Science**

COURSE: **Biology**

LA.9-10.RST.9-10.5: Study key terms and vocabulary.

LA.9-10.RST.9-10.3: Students follow procedures when carrying out an experiment.

LA.9-10.WHST.9-10.2: Students create a project to illustrate the relationship between photosynthesis and respiration. There is also a writing component on summative assessments in form of short answers or essay questions.

Mathematics:

MA.9-12.N-Q.A.1: Students study the loss of energy in a food web.

Computer Science & Design Thinking:

8.1.12.DA.1: Create interactive data visualizations using software tools to help others better understand real world phenomena, including climate change.

Career Readiness, Life Literacies, and Key Skills

9.4.12.CT.3: Enlist input from a variety of stakeholders (e.g., community members, experts in the field) to design a service learning activity that addresses a local or global issue (e.g., environmental justice).

Technology Integration

Career Education

CRP-4: Students visually represent via google slides, poster presentation, booklet, etc. the processes of photosynthesis and cellular respiration.

CPR-5: Students will have an increased awareness of how human population can affect the environment.

CRP-12: Students work productively in collaborative groups using culturally global competence.

Time Frame	2 Weeks
Topic	
Interdependent Relationships in Ecosystems, Succession & Change	
<u>Alignment to Standards</u>	
HS-LS2-1: Use mathematical and/or computational representations to support explanations of

COURSE: **Biology**

factors that affect carrying capacity of ecosystems at different scales.

HS-LS2-2: Use mathematical representations to support and revise explanations based on evidence about factors affecting biodiversity and populations in ecosystems of different scales.

HS-LS2-6: Evaluate the claims, evidence, and reasoning that the complex interactions in ecosystems maintain relatively consistent numbers and types of organisms in stable conditions, but changing conditions may result in a new ecosystem.

HS-ESS3-1: Construct an explanation based on evidence for how the availability of natural resources, occurrence of natural hazards, and climate change have influenced human activity

HS-ESS3-4: Evaluate or refine a technological solution that reduces impacts of human activities on climate change and other natural systems.

HS-ESS3-5: Analyze geoscience data and the results from global climate models to make an evidence-based forecast of the current rate of global or regional climate change and associated future impacts to Earth systems.

Learning Objectives and Activities

Learning Objectives:

- What are abiotic and biotic factors?
- What affects organisms' interactions with each other?
- How are community and ecosystem homeostasis dependent on a complex set of interactions among biologically-diverse individuals?
- What are limiting factors and how do they affect organisms in the biosphere?
- Ecosystems are communities made up of living organisms and their nonliving environment.
- The rise of the human population leads to impacts which may have a detrimental effect on the environment (e.g., climate change).

Learning Activities:

- Identifying relationships - mutualism, parasitism, commensalism
- Cycles of matter - Carbon, Nitrogen, Oxygen
- Model of R vs. K Populations
- Change in population of frogs and human impact
- Lesson on Kaibab Population
- Succession in Mt. St. Helen - primary vs. secondary succession
- Identify cause and effect of natural and human caused fluctuations in populations
- Demonstrate and provide evidence of limiting factors for various organisms
- Evaluate the claims that interactions amongst organisms in ecosystems account for changes in conditions resulting in a new ecosystem (e.g., succession)

Assessments

Township of Ocean Schools

Assistant Superintendent
Office of Teaching and Learning

SPARTAN MISSION:

Meeting the needs of all students with a proud tradition of academic excellence.

DEPARTMENT: **Science**

COURSE: **Biology**

Formative:

- Nutrient Cycle Lab
- List reasons for natural and human caused fluctuations in populations
- Strategic questioning
- Population studies of organisms in the biosphere
- Class discussion - density dependent vs. independent

Summative:

- Diagram the flow of nutrients in an ecosystem
- Describe how climate change may impact an ecosystem
- Collaborative group participation on the impacts of climate change

Benchmark: N/A

Alternative:

- Lab Portfolio
- Mt. St. Helen's activity
- Model of R vs. K Populations

Interdisciplinary Connections

ELA:

LA.9-10.RST.9-10.3: Students follow procedures when carrying out an experiment.

LA.9-10.WHST.9-10.2: There is a writing component to each unit in the form of lab reports. Additionally, each test includes an essay and/or short answer questions.

Mathematics:

MA.9-12.N-Q.A.1: Students calculate population size.

Career Readiness, Life Literacies, and Key Skills

Technology Integration

9.4.12.IML.5: Evaluate, synthesize and apply information on climate change from various sources appropriately.

Career Education

CRP-4: Students plan their cycling lab with chalk with clarity and visual representation.

CPR-5: Students are aware of their impact on the environment and cycling of matter.

DEPARTMENT: **Science**

COURSE: **Biology**

- Endangered Species Activity
- Human Impact on Biodiversity Activity
- Apply data to solve a necessity of life and the impact on the community
- Compare and contrast pros and cons of presented ideas taking into account cost and workload
- Create a solution to alleviate the number of endangered species
- Demonstrate a flipped classroom environment by collaborating, researching and presenting information on a selected environmental issue

Assessments

Formative:

- Group discussion - differentiate between endangered and extinct organisms
- Do Now - human intervention
- Strategic questioning

Summative:

- Multimedia presentation - Endangered Species slide show
- Biodiversity scenarios

Benchmark: N/A

Alternative:

- Lab Portfolio
- Biodiversity project

Interdisciplinary Connections

ELA:

LA.9-10.RST.9-10.1: Students accurately cite through evidence to support text on project.

LA.9-10.RST.10.1: Students research text from authors to support their multimedia presentation.

LA.9-10.WHST.9-10.2A-2F: There is a writing component to each unit in the form of lab reports.

Mathematics:

MA.9-12.N-Q.A.1: Calculation of environmental data/Interpretation of data/Calculate pH.

COURSE: **Biology**

Technology Integration

9.4.12.IML.8: Evaluate media sources for point of view, bias and motivations.

Career Education

CRP-12: Students work productively in collaborative groups using culturally global competence.

Time Frame

1 Week

Topic

Biochemistry

Alignment to Standards

HS-LS1-1: Construct an explanation based on evidence for how the structure of DNA determines the structure of proteins which carry out the essential functions of life through systems of specialized cells.

HS-LS1-2: Develop and use a model to illustrate the hierarchical organization of interacting systems that provide specific functions within multicellular organisms.

HS-LS1-6: Construct and revise an explanation based on evidence for how carbon, hydrogen, and oxygen from sugar molecules may combine with other elements to form amino acids and/or other large carbon-based molecules.

Learning Objectives and Activities

Learning Objectives:

- Explain how Carbon is an essential element in the human body
- What are the four organic compounds that are essential to life?
- How do lipids and carbohydrates differ in their molecular makeup?
- How are carbohydrates (glucose) the basis for other biological processes?
- Compare/contrast DNA and RNA
- What is the importance of enzymes in the maintenance of homeostasis?

Learning Activities:

- Organic Compound WebQuest
- DNA Puzzle
- Enzyme Inquiry Lab
- Toothpickase Activity

Home of the Spartans!

Township of Ocean Schools

Assistant Superintendent
Office of Teaching and Learning

SPARTAN MISSION:

Meeting the needs of all students with a proud tradition of academic excellence.

DEPARTMENT: **Science**

COURSE: **Biology**

- Nutrient Analysis Activity
- Evaluate the optimal conditions for an enzyme to catalyze a reaction by designing an experiment
- Identify organic compounds in various food items by testing each with an indicator
- Determine the similarities and differences between nucleic acids: DNA & RNA
- Differentiate between the four types of organic compounds and the importance in incorporating them in a nutrient-rich diet.

Assessments

Formative:

- Do Now - biochemical reactions
- Completion of DNA puzzle
- Strategic questioning
- Water/Acid/Base Webquest
- Diagram stored and potential energy in chemical bonds

Summative:

- Enzyme Inquiry Lab
- Nutrition Lab
- Chart detailing the chemical make-up of living things in an ecosystem
- Chemistry Scenarios

Benchmark: N/A

Alternative:

- Lab Portfolio

Interdisciplinary Connections

ELA:

LA.9-10.RST.9-10.1: Students accurately cite through evidence to support text on nutrition project.

LA.9-10.WHST.9-10.2A-2F: There is a writing component to each unit in the form of lab reports.

Mathematics:

MA.9-12.A-REI.D.10: Bar graph of two variables in food nutrition lab.

MA.9-12.N-Q.A.1: Counting ratios and measurements.

SPARTAN MISSION:

Meeting the needs of all students with a proud tradition of academic excellence.

DEPARTMENT: **Science**

COURSE: **Biology**

- Potato Core Lab - hypertonic, hypotonic, isotonic
- Cell Agar Lab - how cell size affects diffusion rate
- Describe the structure and function of the cell's organelles
- Determine the change in mass in potatoes in terms of osmosis and identify which type of the solution would be hypotonic, hypertonic, and isotonic to the potato
- Analyze why cells are small by performing a lab activity on diffusion

Assessments

Formative:

- Do Now - prokaryote vs. eukaryotic cells/scientists involved with the cell theory
- Diffusion in the body
- Rice iodine solutions - mini lab
- Strategic questioning - differentiate between diffusion and osmosis

Summative:

- Potato Core Lab
- Cell Agar Lab
- Plant vs. Animal Lab
- Detail cell sizes and rates of diffusion
- Create a chart detailing the structures of organisms and their life functions

Benchmark: N/A

Alternative:

- Lab Portfolio
- Cell Organelle Exploration

Interdisciplinary Connections

ELA:

LA.9-12.RST.9-10.3: Students will follow all lab procedures.

LA.9-10.WHST.9-10.2A-2F: Students discuss the relationship between organelle and diseases in the body by reading and writing their response.

Mathematics:

MA.9-12.N-Q.A.1: Calculate surface area to volume ratio, depth of diffusion, differences in volume, mass, length and diameter of osmosis in potatoes and calculate field of view of cells.

Career Readiness, Life Literacies, and Key Skills

SPARTAN MISSION:

Meeting the needs of all students with a proud tradition of academic excellence.

DEPARTMENT: **Science**

COURSE: **Biology**

- Mitosis and Cytokinesis Lab
- Stem Cell Research
- Asexual Reproduction Activity
- Identify organisms that reproduce asexually and describe the benefits of this type of reproduction
- Justify how the diploid number of chromosomes are maintained during somatic cell reproduction and how this differs from sexual reproduction
- Evaluate the pros and cons of the use of stem cells
- Distinguish practices that can contribute to cell cycle disruption
- Justify why the process of meiosis is used prior to the process of fertilization

Assessments

Formative:

- Do Now - asexual vs. sexual reproduction
- Mitosis webquest
- Strategic questioning - types of cancers and why cancer exists

Summative:

- Asexual lab
- Crossing over lab
- Describe the steps of the cell cycle
- Provide examples of apoptosis in living organisms

Benchmark: N/A

Alternative:

- Lab Portfolio
- Comparing Mitosis & Meiosis on the Table

Interdisciplinary Connections

ELA:

LA.9-10.RST.9-10.5: Students will read about key terms and vocabulary.

LA.9-10.WHST.9-10.2A-2F: Researching stem cells and how they cure disease.

Mathematics:

MA.9-12.S-CP.A.3: The chance a cell will get through the cell cycle.

MA.9-12.N.Q.A.1: Calculation of chromosome number, measuring.

DEPARTMENT: **Science**

COURSE: **Biology**

- Probability and genetics
- The Face Lab
- Protein synthesis decoding sentences of RNA
- Posters - genetic disorders
- Transgenic Slide Show
- DNA Fingerprinting Lab
- Summarize Mendel's laws of genetics
- Follow Mendelian and Non-Mendelian genetic patterns using Punnett squares
- Compare and contrast DNA and RNA

Assessments

Formative:

- Do Now - genetic practice problems/genetic terms
- Mendel's laws of segregation and independent assortment
- Strategic questioning - what makes a genetic disorder non-disjunction vs. hereditary

Summative:

- Interpret karyotypes and determine the abnormalities caused by non-disjunction genetic disorders
- Summarize the process of how proteins are made from DNA
- Summarize the process of DNA replication
- Mitosis vs. Meiosis lab

Benchmark: N/A

Alternative:

- Lab Portfolio
- Karyotype Online lab
- Determine the relationships between mutations and genetic disorders

Interdisciplinary Connections

ELA:

LA.9-10.RST.9-10.7: Complete analysis questions writing component of lab/translate data into charts/tables.

LA.9-10.WHST.9-10.2A-2F: Multimedia presentation.

Mathematics:

MA.9-12.S-CP.A.3: Probability of inheritance.

MA.9-12.N.Q.A.1: Conversion of percentages and ratios, number of base pairs.

DEPARTMENT: **Science**

COURSE: **Biology**

Career Readiness, Life Literacies, and Key Skills

9.4.12.CT.2: Explain the potential benefits of collaborating to enhance critical thinking and problem solving.

Technology Integration

Career Education

CRP-12: Students work productively in collaborative groups using culturally global competence.

Time Frame

1 Week

Topic

Natural Selection

Alignment to Standards

HS-LS2-8: Evaluate the evidence for the role of group behavior on individual and species' chances to survive and reproduce.

HS-LS4-3: Apply concepts of statistics and probability to support explanations that organisms with an advantageous heritable trait tend to increase in proportion to organisms lacking this trait.

HS-LS4-4: Construct an explanation based on evidence for how natural selection leads to adaptation of populations.

HS-LS4-5: Evaluate the evidence supporting claims that changes in environmental conditions may result in: (1) increases in the number of individuals of some species, (2) the emergence of new species over time, and (3) the extinction of other species.

Learning Objectives and Activities

Learning Objectives:

- Why is oxygen not present in early atmosphere?
- How has Miller and Urey's experiment contributed to support the primordial soup hypothesis?
- What factors affect natural selection of a species over time?
- How does evidence contribute to the theory of evolution by way of natural selection?

Assistant Superintendent
Office of Teaching and Learning

SPARTAN MISSION:

Meeting the needs of all students with a proud tradition of academic excellence.

DEPARTMENT: **Science**

COURSE: **Biology**

- What is the relationship between the environment and natural selection?
- What are the four parts of the theory of natural selection?

Learning Activities:

- Peppered Moth Lab - how organisms adapt to changes in environment
- Biochemical Evolution
- Adaptation Lab - how adaptations help organisms live
- Construct explanations and design solutions to investigate the relationship between the environment and natural selection
- Develop an understanding of the factors that cause natural selection of a species over time
- Understand how multiple lines of evidence contribute to the strength of scientific theories of natural selection
- Reflection of specific theories and their contributions to what is accepted today by the scientific community

Assessments

Formative:

- Do Now - evidence of life/origin of life in a cup
- Origin of Life flipped classroom
- Analyze and interpret data that includes evidence to support the theory of natural selection

Summative:

- Present an argument on how physical changes in the environment can lead to species expansion
- Evidence of Evolution lab
- Coacervate Lab

Benchmark: N/A

Alternative:

- Lab Portfolio
- Detail the genetic information that provides evidence for evolution

Interdisciplinary Connections

ELA:

LA.9-10.WHST.9-10.2.A: Organize information into graphic tables.

LA.9-10.RST.9-10.5, 9-10.7: Miller & Urey's debate on Primordial Soup.

DEPARTMENT: **Science**

COURSE: **Biology**

Mathematics:

MA.9-12.N-Q.A.1: Students graph amino acids vs. ammonia in amino acid lab to compare and contrast the trends.

Career Readiness, Life Literacies, and Key Skills

Technology Integration

Career Education

CRP-12: Students work productively in collaborative groups using culturally global competence.

Time Frame

2 Weeks

Topic

Evolution

[Alignment to Standards](#)

HS-LS4-1: Communicate scientific information that common ancestry and biological evolution are supported by multiple lines of empirical evidence.

HS-LS4-2: Construct an explanation based on evidence that the process of evolution primarily results from four factors: (1) the potential for a species to increase in number, (2) the heritable genetic variation of individuals in a species due to mutation and sexual reproduction, (3) competition for limited resources, and (4) the proliferation of those organisms that are better able to survive and reproduce in the environment.

Learning Objectives and Activities

Learning Objectives:

- How does genetic variation play a role in evolution of a species?
- How can probability explain inheritable traits in specific environments?
- How have humans contributed to the expansion or depletion of certain species?
- How are population trends formed in regards to environmental factors?

SPARTAN MISSION:

Meeting the needs of all students with a proud tradition of academic excellence.

DEPARTMENT: **Science**

COURSE: **Biology**

- Why does evolution affect an entire population versus an individual organism?

Learning Activities:

- Evidence of Evolution Lab
- Evolution WebQuest
- Human Adaptation Lab
- Evaluate and describe the four pieces of evidence that support the theory of evolution
- Reflect on specific adaptations that have made humans a successful species on Earth
- Compare and contrast Darwin's theories of evolution to that of previous scientists
- Correlate homologous structures in various organisms to identify common ancestry
- Analyze how two organisms can adapt to similar environments without a common ancestor

Assessments

Formative:

- Do Now - natural selection vs. artificial selection
- Strategic questioning - human traits
- Human vs. Ape exit slip

Summative:

- Natural Selection lab
- Describe various scenarios of organisms adapting to their environment
- Discuss the various causes that may lead to extinction of a species

Benchmark: N/A

Alternative:

- Lab Portfolio
- Population trends presentation

Interdisciplinary Connections

ELA:

LA.9-10.RST.10.1,2,3,4,5,6,7,8,9,10: Students read and differentiate between homologous/analogous.

Mathematics:

MA.9-12.N.Q.A.1: Construct Graph/Interpretation of data of amino acid sequences/collection of measurements.

ELA: See all previous connections.

Mathematics: See all previous connections.

Career Readiness, Life Literacies, and Key Skills

9.4.12.CI.1: Demonstrate the ability to reflect, analyze and use creative skills and ideas (e.g., 1.1.12prof.CR3a).

Technology Integration

Career Education

CRP-4: Communicate clearly and effectively with reason.

Modifications (ELL, Special Education, At Risk Students, Gifted & Talented, & 504 Plans)

ELL:

- Work toward longer passages as skills in English increase
- Use visuals
- Introduce key vocabulary before lesson
- Teacher models reading aloud daily
- Provide peer tutoring
- Use of Bilingual Dictionary
- Guided notes and/or scaffold outline for written assignments
- Provide students with English Learner leveled readers.

Supports for Students With IEPs:

- Allow extra time to complete assignments or tests

Home of the Spartans!

SPARTAN MISSION:

Meeting the needs of all students with a proud tradition of academic excellence.

DEPARTMENT: **Science**

COURSE: **Biology**

- Guided notes and/or scaffold outline for written assignments
- Work in a small group
- Allow answers to be given orally or dictated
- Use large print books, Braille, or books on CD (digital text)
- Follow all IEP modifications

At-Risk Students:

- Guided notes and/or scaffold outline for written assignments
- Introduce key vocabulary before lesson
- Work in a small group
- Lesson taught again using a differentiated approach
- Allow answers to be given orally or dictated
- Use visuals / Anchor Charts
- Leveled texts according to ability

Gifted and Talented:

- Create an enhanced set of introductory activities (e.g. advance organizers, concept maps, concept puzzles)
- Provide options, alternatives and choices to differentiate and broaden the curriculum
- Organize and offer flexible small group learning activities
- Provide whole group enrichment explorations
- Teach cognitive and methodological skills
- Use center, stations, or contracts
- Organize integrated problem-solving simulations
- Propose interest-based extension activities
- Expose students to beyond level texts.

Supports for Students With 504 Plans:

- Follow all the 504 plan modifications
- Text to speech/audio recorded selections
- Amplification system as needed
- Leveled texts according to ability
- Fine motor skill stations embedded in rotation as needed
- Modified or constrained spelling word lists
- Provide anchor charts with high frequency words and phonemic patterns
